EXPERIENCE

Founder & Flutter Engineer 08/2025 – 01/2026
[WhatsUnity](#)

Engineered a scalable community platform, prioritizing data privacy and low latency by deploying a self-hosted backend via Docker and Edge Functions.

- Developed a comprehensive mobile platform using Flutter and Bloc to digitize compound management, enabling structured tenant organization by mapping users to specific buildings and apartment units for verified neighbor interactions
- Designed a specialized voting architecture to separate high-stakes community decision-making from high-velocity chat data, ensuring data integrity for residents.
- Integrated a full-stack **Supabase** backend to handle Admin-to-Resident announcements and a unified "Report History" system for Maintenance, Care Services, and Security requests.
- Designed a rich-media chat interface supporting Google Drive integration for file sharing and voice notes with visual waveforms.

Full-stack Developer 09/2024 – 02/2026
[Medicare](#)

Developed a multi-role medical management system, implementing optimized MySQL indexing to handle high-concurrency appointment scheduling and sensitive health records.

- Designed and developed a full-stack web application for Medicare, a medical services platform, using React for the front- end and Spring Boot for building scalable and secure RESTful APIs.
- Built interactive UI components with React, ensuring responsive design and seamless user experience across devices.
- Developed robust backend services with Spring Boot, handling user authentication, appointment scheduling, and role-based access control.
- Integrated third-party services and libraries for enhanced functionality such as notifications, secure login, and form validation.
- Deployed the application to a cloud environment with a focus on performance, scalability, and uptime.
- Ensured maintainable and high-quality code through modular design, version control, and thorough testing (unit and integration).
- Followed best practices in software design, application security, and RESTful APIs standards throughout the development lifecycle.

Other Experience 2019– 2025

- Flutter Developer (Freelance):** Delivered production-grade mobile apps using **Clean Architecture** and **Bloc**.
- UI/UX Designer:** Built a marketplace system for WordPress sites, achieving a **25% increase in vendor sales**.

SUMMARY

Founder and Software Engineer focused on building high-impact systems from first principles. Experienced in owning the full product lifecycle—from architectural design and self-hosted infrastructure to production-grade mobile and web applications. Passionate about simplifying complex systems and leveraging AI to accelerate development cycles.

TECHNICAL SKILLS

- Flutter** (Bloc, Provider, Localization, SharedPreferences)
- REST APIs & Backend Integration
- Supabase** (Auth, Realtime, Storage, Edge Functions)
- State Management & App Architecture
- Docker**, Git, CI/CD
- Firebase** (basic)
- React** (Frontend) | **Spring Boot** (Backend)
- UI/UX:** Figma, Adobe XD
- Ai-Augmented Development :** Cursor , LLM-based

EDUCATION

Diploma degree
Computer Science GPA
[Cairo University](#) **3.2 / 4.0**
03/2023 - 03/2026

Bachelor's degree
construction & building
[The Arab Academy for Science, technology & Maritime Transport \(ABET Accredited\)](#) GPA
01/2009 - 02/2015 **2.4 / 4.0**
